SUMMARY OF QUALIFICATIONS

Senior Software Engineer with 5+ years of experience in backend development, focusing on Golang and microservices architecture. Has English and Japanese (JLPT N2) language skills, with practical experience working in English environments. Experienced in building full-stack applications, managing databases, and setting up automated testing pipelines.

EDUCATION

Silpakorn University – Nakhon Pathom, Thailand May 2017 - Nov 2020
Bachelor of Science in Information Technology
Cumulative GPA: 3.79 (First Class Honors)

LANGUAGES

Thai: Native Speaker
English: Certified proficiency at the CEFR C1 (Advanced) level
Japanese: Certified proficiency at the JLPT N2 level

TECHNICAL PROFICIENCIES

Programming Languages: Golang, Java, Node.js
AI: Claude Code, Github Copilot
Databases: PostgreSQL, MySQL, SQL Server, MongoDB, CouchDB, Redis
DevOps & Infrastructure: Docker, Kubernetes, Jenkins, GitHub CI/CD, Grafana
Cloud Infrastructure: AWS
Testing: Robot Framework, Playwright, JMeter

RELEVANT EXPERIENCE

Feedme POS – Kuala Lumpur, Malaysia (Remote) Jun 2026– Present
Senior Software Engineer

- Develop POS applications using Flutter and Vue for the frontend, Node.js and Golang for the backend, while using GitHub Copilot and Claude to speed up development.
- Build AI skills and MCP tools to support the Thailand team with the onboarding process.
- Integrate the POS system with third-party delivery platforms in Thailand.
- Collaborate closely with the Malaysian engineering team, using English as the primary language to communicate and work together.

Ascend Group – Bangkok, Thailand Dec 2021 – May 2026
Senior Software Engineer (Jan 2024 - May 2026)
Software Engineer (Dec 2021 - Dec 2023)

- Develop a Mutual Fund Web Application within the True Money Application. Designed API specifications and implemented them in a microservices architecture.
- Utilized Redis for storing credential data (such as phone-no and API token) to manage and optimize authentication processes.
- Developed api gateway and backend-for-frontend (BFF) APIs to manage actions and serve data to the frontend efficiently.
- Ensured system reliability by maintaining 100% business logic coverage and executing end-to-end integration tests with Robot Framework and Karate; validated scalability through JMeter while leveraging Prometheus, Grafana, and OpenSearch for comprehensive resource monitoring and logging.
- Develop a batch process using Golang, implementing Goroutines for concurrent operations.

Poramest Vichitnopawan

Bangkok, Thailand • +66942510696 • 2411kjn@gmail.com • markporamest.github.io/portfolio

- Develop an internal library for specific use cases, such as logging request and response data when communicating with external services.
- Migrated a legacy service from Node.js to Golang, enhancing performance and reducing operational costs.
- Integrate Keycloak to optimize user authorization management within the back office environment, enhancing security, access control, and administrative efficiency.

Motif Technology – Bangkok, Thailand Dec 2020 – Nov 2021

Software Engineer

- Spearheaded the development of the I-Legal Web Application tailored for in-house users within a bank company.
- Build the entire frontend using Angular and the backend using Java, adhering to the specified requirements
- Designing a batch process to read input data from a CSV file, save it into a database, and generate corresponding output reports.
